## DETAILED ACTION

1. Claims 1-9 are presented for examination. Claims 1 and 7 have been amended.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Myer et al. (US 6,574,234).

4. As per claims 1 and 3-6, Myer teaches the invention as claimed including a process for assembling a group of networked elements controlling equipment of a building, wherein when the elements are in a learning mode [col. 7, lines 10-16 & 53-62], a first action exerted by an installer on one of the elements is interpreted as an interrogation of the element concerning the element's state of membership in the group (included--excluded) and triggers the emission of an information signal regarding its state [col. 8, lines 15-34], and a following action exerted by an installer on this element is interpretable as an order for modifying the element's state of membership in the group [col. 8, lines 34-55; col. 18, line 53 – col. 19, line 55].

5. As per claim 2, Myer teaches the element emits this information signal during a timeout (T') [col. 19, lines 10-20].

6. As per claim 7, Myer teaches a pulse engendered manually on a program relating to this element [col. 8, lines 34-55; col. 18, line 53 – col. 19, line 55].

7. As per claims 8 and 9, since they are system claims of claims 1-7, they are rejected for the same basis as claims 1-7 above.
